                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               4-AUG-2000;
                                                                                                                                                                                                                                                               02-AUG-2001
   Sequences AAF21614 - AAF22031 represent DNA sequences encoding human proteins AAB59128. The DNA and protein sequences are proteins AAB59128. The DNA and protein sequences are sequences AAF22032 - AAF22040 and AAB59129 which are used in the invention are sequences AAF22032 - AAF22040 and AAB59129 which are used in the isolation and characterisation of the DNA and protein sequences of the invention. The breast and ovarian cancer associated DNA, protein, agonist or antagonist sequences exhibit cytostatic; immunosuppressive; noctropic; neuroprotective; antivital; antiallergic; hepatotropic; antidiabetic; antifungal; antiparasitic and cardiant activity. The polynuclectide and protein sequences are used in the diagnosis of cancer, particularly artifungal; antiparasitic and cardiant activity. The polynuclectide and protein sequences, proteins, agonists and agonists may also be used in the diagnosis, prevention and treatment of immune disorders e.g. Addison's disease, allergies, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; cardiovascular disorders such as mycocardial ischaemias; wound healing; elections and screbral anoxia and epilepsy; and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New human breast and ovarian cancer associated gene sequences and the polypoperides encoded by these genes, useful in the prevention, treatment and diagnosis of cancer, immune disorders, cardiovascular disorders and neurological diseases.

```
The present invention provides human cDNAs, proteins and related genomic DNAs. These can be used in the treatment of neural, immune system, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal and proliferative disorders and inflammation. The present sequence is a cDNA of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Human, nootropic, neuroprotective, cytostatic, dermatological, virucide, immunosuppressive, antinflammatory, anti-HIV; antibacterial, vulnerary, antiparkinsonian; antisickling, antianaemic, antiarthritic, cancer, antirheumatic, hepatotropic, cerebroprotective, antinflammatory; antialiargic, antidiabetic, antiulcer, anticonvulsant, antifungal, antiparasitic, cardiant, immune disorder, cardiovascular disorder;
                                                                                                                                                                                                                                               Isolated nucleic acid molecule encoding an inflammation-associated polypeptide is used in preventing, treating or ameliorating a medical condition.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         neurological disease; infection; nephrotropic; gene therapy; vaccine;

The invention relates to novel genes (ABV83682-ABV84101) and proteins (ABP66710-ABP67129) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and evarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetess mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel polypeptide useful for diagnosis, prognosis, prevention, treatment of immune, hyperproliferative, renal, respiratory, cardiovascular, reproductive, endocrine, gastrointestinal and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Claim 1; SEQ ID NO 238; 369pp + Sequence Listing; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Barash SC;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present sequence is NSEQ gene that is co-expressed with one or more known matrix-remodeling genes in a number of biological samples using an expression vector. This sequence was identified from the Incyte clone 3948614. The gene, protein, and antibody sequences can be used in the diagnosis, and treatment or prevention of a disease associated with its altered expression. The diseases that can be treated are matrix-remodeling diseases, including cancer, cardiomyopathy, arthritis,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention comprises human nucleotide sequences which are co-expressed with matrix-remodeling genes. Matrix-remodeling is associated with the construction, destruction and reorganisation of extracellular matrix components. The matrix-remodeling-associated nucleotides of the invention are useful for screening for and purifying ligands that specifically bind to the nucleotides of the invention. The matrix-remodelling-associated nucleotides of the invention are also useful in the diagnosis, prevention, treatment and evaluation of therapies for diseases associated with matrix remodelling e.g. angiogenesis architits, archrosociated with matrix remodelling de.g. angiogenesis archititis, archrosociated cancer, cardiomyopathy, diabetic necrosis, fibrosis and ulceration). The present DNA sequence represents a human matrix-remodeling-associated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated polynucleotide coexpressed with matrix-remodeling genes, useful in diagnosis, prognosis, prevention and treatment of diseases associated with matrix-remodeling such as angiogenesis, arthritis and

                                                                                          AAA37022 to AAA37144 encode the new isolated human transmembrane, receptor or secreted PRO polypeptides given in AAY99340 to AAY99462. The transmembrane and receptor PRO proteins can be used for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions. The polypeptides and nucleotide sequences praction then have various industrial applications, including uses as pharmaceutical and diagnostic agents. AAA37145 to AAA37330 represent PCR primers and hybridisation probes used in the isolation of the PRO
New mammalian DNA sequences encoding transmembrane, receptor or secreted PRO polypeptides, useful for screening of potential peptide or small molecule inhibitors of the relevant receptor/ligand interactions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Secreted and transmembrane proteins and nucleic acids designated PRO, useful as hybridization probes, in chromosome and gene mapping and gene

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -OCT-1998
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-OCT-1998
     ö
The present invention relates to secreted and transmembrane proteins. These proteins and the DNA encoding them may be used as hybridization probes, in chromosome and gene mapping and in the generation of antisense RNA and DNA. They may also be used used to generate either transgenic animals or knockout animals which are in turn useful for development and screening of therapeutically useful reagents. The nucleic acids may also be used in gene therapy
                                                                                                                                                                                                                                                                                                                                                                                                               Human; secreted and transmembrane protein; PRO; angiogenesis; endothelial cell proliferation; wound healing; immune response; T-lymphocytes proliferation; neonatal heart hypertrophy; tumour; cardiac insufficiency disorder; calcium flux; inflammation; vascular endothelial growth factor-stimulated proliferation; mammalian kidney mesnagial cell proliferation; Berger disease; nephropathy; Schanlein-Hencor purpura; celiac disease; crohn's disease; dermaritis herpetiformis; diabetes; haemoglobin switch; insulinaemia; pancreatic beta-cell precursor cell differentiation; thalassemias; obesity; auditory hair cell regeneration; hearing loss; bone disorder; cartilage disorder; sports injury; arthritis; gene; ss.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               7856,

JUS-09-949-016-136102, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/241,756

PRIOR PELING DATE: 2000-10-20

PRIOR PLING DATE: 2000-10-30

PRIOR FILING DATE: 2000-10-40

PRIOR FILING DATE: 2000-10-40

PRIOR FILING DATE: 2000-10-03

PRIOR FILING DATE: 2000-09-08
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

```
/done libe Soares fetal lung NbH19W"
//clone libe Soares libe I libe Soares libe Soares libe Soares libe Soares libe Soares (Parmacia), double-stranded cDNA was size selected, ligated to Eco Riadapters (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of a modified pT7T3 vector (Pharmacia). Library went through one round of normalization to a Cot = 5. Library constructed by Bento Soares and M.Fatima Bonaldo. This library was constructed from the same fetus as the fetal heart library, Soares fetal heart NbHH19W."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Eukaryota, Viridiplantae, Streptophyta, Embryophyta, Tracheophyta, Spermatophyta, core eudicots, asterids, lamids, Solanales, Solanaceae; Solanum, Lycopersicon.
